ТИП

D300

С ПРИСЪЕДИНИТЕЛНИ РАЗМЕРИ
ПО EN 12756 (DIN 24960)

РАБОТНИ ПАРАМЕТРИ

Работно налягане - P = 1,0 МПа
Работна температура - T = 240°C
Скорост на плъзгане - V_n = 20 m/s

Тяло от масивен метал, неразтоварено, с централна пружина, зависимо от посоката на въртене.

КОНСТРУКТИВНИ ОСОБЕНОСТИ

1. Материали за триещите елементи:

- графит;
- техническа керамика
- волфрамов карбид;
- специални неръждаеми стомани
- силициев карбид.

2. Материал за "O" пръстените:

- NB-каучук до t=90°C (бензин, масло);
- EP-каучук до t=120°C (вода, пара);
- FPM-(Витон) до t=220°C (масло, агресивни разтвори);
- PTFE-(Тефлон) до t=240°C (силно агресивни среди).

3. Всички метални детайли са изработени от неръждаема стомана.

Примерно приложение на механични уплътнения тип D300 по система "гръб с гръб"

ЗАБЕЛЕЖКИ :

1. Допустими монтажни отклонения на размера L1 - до +/- 1 мм.
2. При заявяване да се посочи посоката на въртене на вала.

(Гледано от страна на контратялото, вала е с дясно въртене, ако той се движи по посока на часовниковата стрелка).

Изпълнение D300 с контратела тип: K1 и K2.

Изработва се и с контратела тип: K5, K6, K8, K9
